

Rev. C

Features

- Full Power at Wide Output Current Range (Constant Power)
- Adjustable Output Current (AOC) with Programmability
- Isolated 0-10V/PWM/3-Timer-Modes Dimmable
- INV Digital Dimming, UART Based Communication Protocol
- Dim-to-Off with Standby Power ≤ 0.5 W
- Always-on Auxiliary Power: 12Vdc, 250mA, 3W (Transient Peak Power up to 10W)
- **Output Lumen Compensation**
- End-of-Life Indicator
- Input Surge Protection: DM 6kV, CM 10kV
- All-Around Protection: IUVP, IOVP, OVP, SCP, OTP
- IP66 / IP67 and UL Dry / Damp / Wet Location
- TYPE HL, for Use in a Class I, Division 2 Hazardous (Classified) Location
- 5 Years Warranty

Description

The EUM-075SxxxMx series is a 75W, constant-current, programmable and IP66/IP67 rated LED driver that operates from 90-305Vac input with excellent power factor. Created for smart lighting application, this family provides an auxiliary voltage and dim-to-off functionality for powering low voltage, wireless controls. The dimming control supports 0-10V dimming as well as two-way communication via Digital Dimming, a UART based communication protocol. The high efficiency of these drivers and compact metal case enables them to run cooler. significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, input under voltage, input over voltage, output over voltage, short circuit, and over temperature.

Models

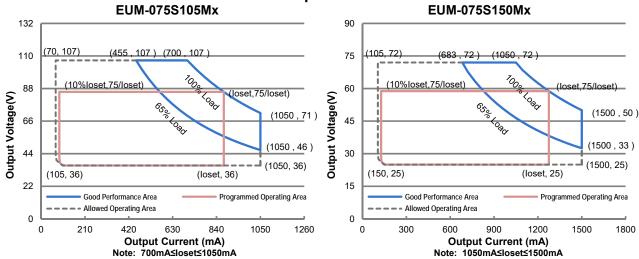

Adjustable Output	Full-Power Current	Default Output	Input Voltage	Output Voltage	Max.	Typical Efficiency	Typical Power Factor		Model Number
Current Range	Range(1)	Current	Range(2)	Range	Power	(3)		220Vac	(6)
70-1050mA	700-1050mA	700 mA	90~305 Vac/ 127~300 Vdc	36~107 Vdc	75W	90.5%	0.99	0.96	EUM-075S105Mx ⁽⁴⁾
105-1500mA	1050-1500mA	1050 mA	90~305 Vac/ 127~300 Vdc	25~72 Vdc	75W	89.5%	0.99	0.96	EUM-075S150Mx ⁽⁴⁾
140-2100mA	1400-2100mA	2100 mA	90~305 Vac/ 127~300 Vdc	18~5/I \/dc	75W	89.0%	0.99	0.96	EUM-075S210Mx ⁽⁵⁾

Notes: (1) Output current range with constant power at 75W

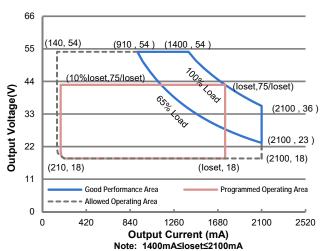

- (2) Certified input voltage range: UL, FCC 100-277Vac; otherwise 100-240Vac.
- (3) Measured at 100% load and 220Vac input (see below "General Specifications" for details).
- (4) SELV output.
- (5) Class 2 & SELV output.
- (6) x = G are UL Recognized, ENEC and CCC, etc. models; x = T are UL Class P models;

Dimming

• 0-10V Dimming

The recommended implementation of the dimming control is provided below.

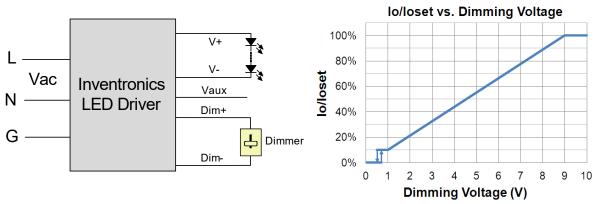

10/15

Fax: 86-571-86601139

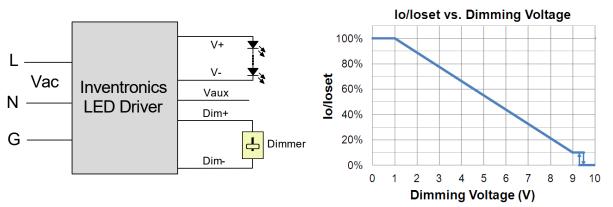

Specifications are subject to changes without notice.

All specifications are typical at 25 $^{\circ}\!\text{C}$ unless otherwise stated.

Implementation 1: Positive logic

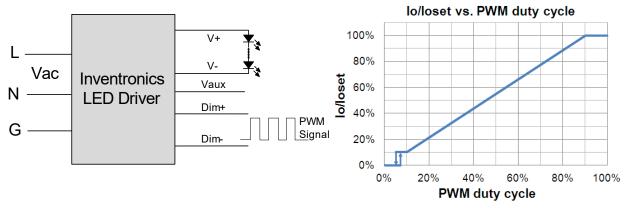

Implementation 2: Negative logic

Notes:

- 1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
- 2. The dimmer can also be replaced by an active 0-10V voltage source signal or passive components like
- 3. When 0-10V negative logic dimming mode and Dim+ is open, the driver will dim to off and be standby.

PWM Dimming

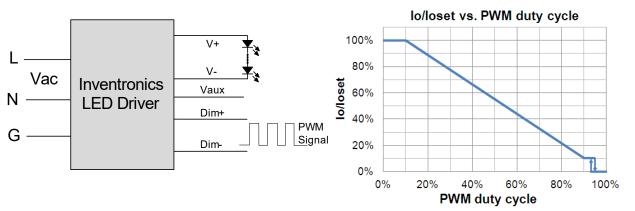

The recommended implementation of the dimming control is provided below.

Implementation 3: Positive logic

11/15

All specifications are typical at 25°C unless otherwise stated.

Implementation 4: Negative logic

Notes:

- 1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
- 2. When PWM negative logic dimming mode and Dim+ is open, the driver will dim to off and be standby.

Time Dimming

Time dimming control includes 3 kinds of modes, they are Self Adapting-Midnight, Self Adapting-Percentage and Traditional Timer.

- Self Adapting-Midnight: Automatically adjusts the dimming curve based on the on-time of past two days (if difference <15 minutes), assuming that the center point of the dimming curve is midnight local time
- **Self Adapting-Percentage**: Automatically adjusts the on-time of each step by a constant percentage = (actual on-time for the past 2 days if difference <15 min) / (programmed on-time from the dimming curve).
- Traditional Timer: Follows the programmed timing curve after power on with no changes.

Output Lumen Compensation

Output Lumen Compensation (OLC) may be used to maintain constant light output over the life of the LEDs by driving them at a reduced current when new, then gradually increasing the drive current over time to counteract LED lumen degradation.

End Of Life

End-of-Life (EOL) is providing a visual notification to a user that the LED module has reached the end of manufacturer-specified life and that the replacement is recommended. Once active, an indication is given at each power-up of the driver, which the driver indicates this through a lower light output during the first 1 minute before normal operation is continued.

Digital Dimming

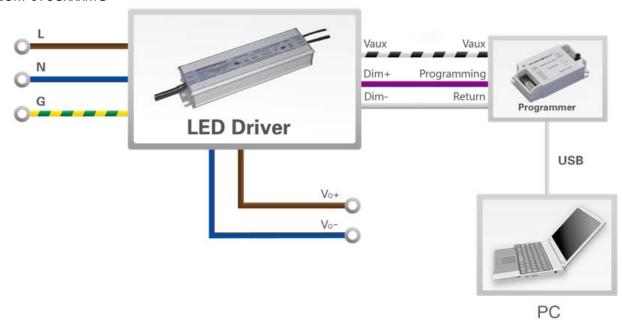

Inventronics Digital Dimming is a UART (Universal Asynchronous Receive Transmitter) based communication protocol. Please refer to <u>Inventronics Digital Dimming</u> file for details.
